
SPY, 30-day windows by year of the window end. Error bars: Wilson 95% CI (overlapping windows treated as independent, so optimistic); a year holds only 8–9 non-overlapping windows. First bar: o4-mini output of January 2026 (parsed answers for 1,412 of 1,476 windows; the 64 answers re-parsed in 2026 are not drawn); other bars: the rule applied to all windows of the series in the legend.
